

Inclusion of 'Sustainability' in Community Based Food Safety Audit Assessments

Greg Burke

School of Food Science & Environmental Health

greg.burke@tudublin.ie

Problem: Students recommending solutions logical from EH perspective but wrong for environment and business.

External waste bin overflowing.

Past recommended increase no of bins or more frequent collections.

Unsustainable solution.

Sustainable solution is to analyse causes of waste, reduce volume **and** cost of all wastes and their disposal

More waste, more cost.

Sustainable solution
Separate at source
Less waste
Less cost

Change three things.

- Include sufficient awareness of additional environmental best practice in lecture content.
- Review best past assessments s in lecture time.
- Build sustainability into assessment specification and marking scheme.
